Release Date: FOR IMMEDIATE RELEASE

CTDI Acquires Access Product Families from Verso Technologies

West Chester, Pa. (July 23, 2008) Communications Test Design, Inc. (CTDI), the largest independent global telecommunications repair and logistics provider, has announced that it acquired the assets and products of Verso Technologies' family of access products, including integrated access devices, access routers, optical access devices and bandwidth aggregators. This acquisition includes the Verilink 8000/6000, iMarc, WANSuite, XEL-CORE, ArcaDACS, Shark, Prism, Orion, Terra, AS2000, and NetEngine product lines (collectively, the "Verilink Products").

The Verilink Products complement CTDI's existing portfolio of Access products which includes the AccessNode/UE9000, eLuminant, XCel (GoDigital), and fiber optic product families. CTDI's objective for acquiring the Verilink Products is to provide its customers with a comprehensive suite of access products. Regarding Verilink products, CTDI's strategy is to provide new product availability, repair and technical support services, and enhanced engineering efforts to evolve the products with new offerings and features. CTDI's engineering, manufacturing, and support efforts will include the transition of over 30 former Verso employees to CTDI, including a facility based in Huntsville, Ala. Leveraging this talent and product knowledge will ensure a smooth product management transition.

"This latest product acquisition strengthens CTDI's current Access product and service portfolio. This should be encouraging to Verilink customers based on CTDI's track record for excellent support of acquired product lines" states Brian Parsons, Director of CTDI's Products Division. CTDI will immediately begin managing all sales, service and support needs related to the

Verilink Products. Visit www.ctdi.com for a full listing of technologies that comprise CTDI's Products Division.
