Release Date: FOR IMMEDIATE RELEASE

CTDI Acquires Access Product Family from Conklin-Intracom

West Chester, PA (January 9, 2009) Communications Test Design, Inc. (CTDI), a global leader in the engineering, manufacturing, and maintenance of telecommunications networks, announced today that it acquired the assets and products relating to the Access product families from Conklin-Intracom. This acquisition includes the FlexAccess 9000 and the C8000+4™ Small Digital Loop Carrier (SDLC) product lines (collectively, the “Conklin Products”).

The Conklin Products compliment CTDI's existing portfolio of Access products which includes the AccessNode/UE9000, eLuminant, XCel (GoDigital), Verilink and fiber optic product families. CTDI's objective for acquiring the Conklin Products is to provide our customers with a comprehensive suite of Access products. Regarding Conklin products, CTDI's strategy is to provide new product availability, repair and technical support services, and enhanced engineering efforts to evolve the products with new products and features. Leveraging CTDI's engineering talent and product knowledge will ensure a smooth product management transition.

“This latest product acquisition by CTDI strengthens our current Access product and service portfolio. This should be encouraging to Conklin customers based on CTDI's track record for excellent support of acquired product lines” states Brian Parsons, Director of CTDI's Products Division. CTDI will immediately begin managing all sales, service and support needs related to the Conklin Products. Visit www.ctdi.com for a full listing of technologies that comprise CTDI's Products Division.
