CTDI Introduces New Line of Fiber Optic Cable Assemblies

—Features Quality Construction, Competitive Pricing, Easy Order Options—

WEST CHESTER, Pa. (February 11, 2007)—Communications Test Design, Inc. (CTDI), the largest independent global provider of telecommunications repair and logistics services, today announced the introduction of a complete line of customized fiber optic cable assemblies.

Designed to provide maximum flexibility, full customization, competitive pricing and customer-friendly ordering solutions, the CTDI fiber optic line is suitable for any application requiring durable, high-quality and reliable cabling.

Assemblies are currently available in simplex, duplex and up to 24-pair fan-out construction, with SC, LC and ST connector options, and are constructed using singlemode or multimode fiber. Hybrid connection and custom length assemblies, priced up to ten percent lower than competitive products, are also available. All products meet Telecodia GR-326 compliance standards and undergo rigorous in-house testing to ensure quality.

Coinciding with the release of the new line, CTDI has launched a Web portal where customers can view products, review technical specifications, select delivery options, and complete orders at <http://products.ctdi.com>. Both traditional and EDI ordering methods are available. Standard-sized cable assemblies can be delivered within 24 hours within the United States, and advanced stocking inventories are available for international orders.

“CTDI has become a one-stop telecommunications solution by leading and listening to our customers needs,” states Brian Parsons, director of CTDI’s Products Division. “The goal with the new fiber optic line is to answer the challenges facing our customers and network engineers, and to provide high-performance cables that are priced competitively, easy to order, and can be delivered in short production times. With many of our customers in the middle of aggressive FTTP roll-outs, they can be assured that CTDI will provide a quality fiber optic cable product, delivered on-time, and with their best-cost objectives met.”

-MORE-

The new line is the latest addition to CTDI's Products Division, which includes the eLuminant and GoDigital lines, plus a number of premium-quality DSL, Broadband and Access Transport products, with total sales and after market solutions.
